

## DVE Huddle Room™ 70

### The Intelligent and Affordable Telepresence Solution for Meeting Rooms

The DVE Huddle Room is an elegant immersive conferencing system for meeting rooms throughout the enterprise. The DVE Huddle Room provides an eye level camera hidden behind the picture for true telepresence. The total solution is designed to enable close proximity viewing of the large screen so that the people appear to be on the other side of the table (*not on the other side of the room*). This enables the DVE Huddle Room to have a smaller overall footprint and thereby permits placement in small meeting rooms. Based on numerous patents and research in human communication, the room creates a highly realistic roundtable conversational experience with real-size people. Each room comes with a boardroom quality table custom made for each client. The DVE Huddle Room is the superior choice for serious minded executives and leaders who want a practical, effective, and affordable true telepresence solution.
